PROFESSIONAL SUMMARY

AI engineer with hands-on experience evaluating enterprise graph-RAG systems, building graph health metrics and LLM evaluation pipelines on a Neo4j and Milvus stack, and testing knowledge-graph pipelines against production data. Seeking a role where I can tackle challenging problems, learn from a motivated team, and contribute both technically and creatively, with a focus on ownership, collaboration, and building products that create real-world impact.

EDUCATION

VIT Chennai - *Bachelor of Computer Science, specialization in AI & Robotics* 2022 - Aug 2026
CGPA: 7.65/10
Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Software Engineering, Computer Networks, Operating Systems
Honors: Semi-Finalist, Build with India Hackathon (2024)

SKILLS

Languages: Python, Java
Core CS: Data Structures & Algorithms
AI/LLM & Graph: Neo4j, Cypher, Milvus, FastAPI, Graph-RAG, GPT-based LLMs
Evaluation: DeepEval, RAGAS, LLM-as-judge, BERTScore, F1-score, ROC-AUC
Databases & Tools: MySQL, Git, Azure DevOps, Jupyter Notebook

EXPERIENCE

Synapt - *Software Developer Intern* Jun 2026 - Present

- Developed a multi-metric graph health evaluation system for an enterprise graph-RAG platform built on Neo4j, Milvus, and FastAPI; testing on production graph data exposed defects in metric logic and chunk-ID mapping.
- Implemented an LLM evaluation framework with DeepEval and RAGAS covering hallucination, faithfulness, and context precision/recall, with a 92% pass rate across 25 test cases.
- Built a pipeline comparing LLM outputs on faithfulness, hallucination rate, and BERTScore, combined into a weighted composite score.
- Implemented regression testing using a golden dataset via automated API calls to catch regressions in the pipeline across changes.

Hvantage Tech Solutions Pvt. Ltd., Indore - *Data Science Intern* May 2025 - Jul 2025

- Cleaned and preprocessed large datasets in Pandas and NumPy, maintaining 98% data integrity and cutting model training time by 20%.
- Raised model predictive accuracy by 12% through validation with F1-score and ROC-AUC.

RELEVANT PROJECTS

Low-Cost Brain-Computer Interface (BCI) for ALS Patients (Patent Filed) - Single-channel EEG-based BCI built with an AD8232 amplifier and ESP32 that detects eye blinks in real time to control a computer. Implemented the signal processing and blink-detection algorithms behind a low-cost, customizable communication interface for people with limited motor control.

AI-Driven Coding Practice and Assessment Platform [Live Demo] - Full-stack web application built with React, Node.js, and LLM APIs that delivers personalized coding challenges with AI-generated feedback. Automated hints and real-time difficulty adjustment reduced learner dropout by 25%.

Secure Lost-and-Found Asset Matching System [Live Demo] - AI-based matching platform with location-aware verification and fraud prevention. Metadata filters and confidence scoring reduced false matches by 40%.

Nonprofit Medicine Donation Management System [Live Demo] - Donation tracking platform with user authentication, encrypted transactions, and role-based dashboards. Improved compliance reporting efficiency by 30%.

Weather Resilient Drone [GitHub] - Autonomous drone navigation system in Simulink using PID controllers for real-time stabilization and a 6DOF simulation to handle wind disturbances.
